

Team pilot notes

The following notes are the notes our team have made during the pilot testing at NEMO Museum in Amsterdam on 6th and 7th of June.

These notes will help us establish the final adjustments for our data collection application.

- Make text clickable or increase boxes for multiple choice
- Increase likert scale size so it's easier to click
- Maybe make a small example before taking the test
 - Fruits or something simple. Helps to understand what they should do.
- Jump to end / demographics if kid doesn't want to finish
- Maybe add an option to finish the test earlier.
- Keep the possibility of choosing a certain version but also add a random option
- Make the same image not appear twice consecutively. Consecutive photos should be different
- Children tended to move/press the images when shown the information/instruction before starting the IAT
- Remote inspection tool
- Put video at the end of the demographics for the control groups
- Put two buttons on the start quiz button to send the kid back or skip him
- Show the name at the end too
- Back button in the hello page
- Select random scenario in the backend for the final app version
- Clicking nationality Nederlandse doesn't select sometimes
