# Team meeting

**19 MAY 2020** / 13:00 PM

## Attendees

Andrei Geadau, Dragos Vecerdea, Alin Dondera, Alex Manolache, Ionut Constantinescu

## Topics discussed

1. TA feedback
2. Solving Problems
3. Preparing the midterm demo
4. Planning

## Notes

- Sending the question object from the server to the client before demo would be nice. This shows that the quiz is not hardcoded on client side and we can add any question to the quiz. (based on what is stored in the database)

- Discuss how to send data between client and database. Transforming client data structure (JSON array) to database structure.

- What tasks to focus on this week. What to have done by the end of the week. (see gitlab board)

- Not necessary to make the collection app work for mobile platforms. (just for dissemination part)

## Action Items

1. Document the structure of the repository too (instructions for running the project, distinguish between libraries, structure)
2. Getting markdowns from TA for coverage percentange badge for gitlab
3. See any IAT test for mobile platforms
4. Finish preparations for midterm meeting

## Next Meeting Agenda

Tomorrow 20/05 we will have the midterm presentation.
